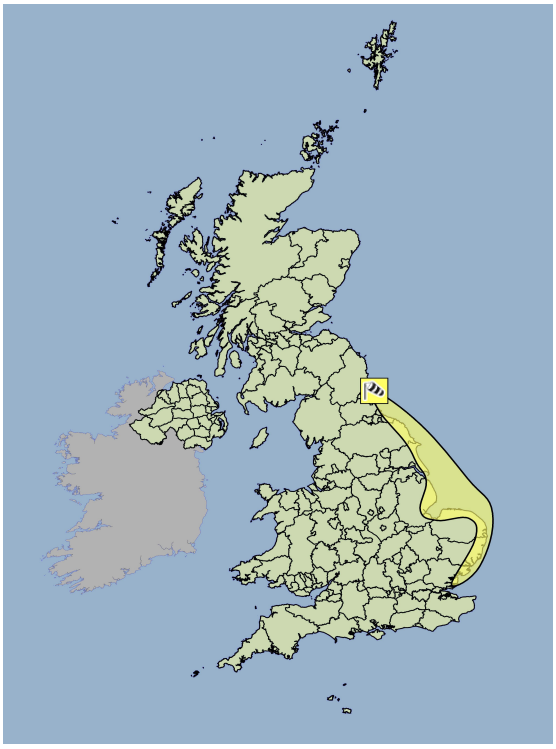
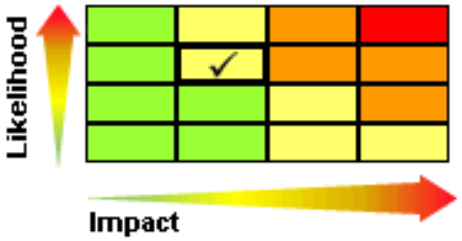
National Severe Weather Warning Service





Chief Forecasters Assessment
Low pressure in the North Sea has given rise to strong northerly winds along eastern coasts of England today, slowly easing this evening. Gusts of 50 to 60 mph are possible in places. Wind damage is likely to be minimal, but associated large waves and surge bring the likelihood of some minor coastal flooding and occasionally hazardous travelling conditions in exposed coastal areas.

The risk of disruption will decrease again quickly later this evening, though it will remain windy in coastal areas into Friday.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **12:00 on Thu, 10th Oct 2013** until **23:59 on Thu, 10th Oct 2013**

Gale force northerly winds are causing large waves and a surge in sea levels along coasts in eastern England today.

The public should be aware of the potential for minor coastal disruption, such as overtopping of sea walls and flooding of coastal roads.

This is an update to the warning issued on Wednesday.
